

Groomsta – Product Requirements Document (PRD)

1. Overview

Groomsta is a hybrid **home grooming + partner salon booking** platform designed for customers across Delhi NCR. It lets customers book home grooming services or visit partner salons, while allowing grooming professionals and salons to accept jobs and manage earnings via the same web interface.

This PRD documents all features required for **Version 1.0**, focusing on simplicity, scalability, and a premium user experience.

2. Product Goals

- Deliver the **smoothest booking experience** for grooming services (home + salon).
 - Provide partners with a **fast, reliable job acceptance system**.
 - Build a **dynamic pricing ecosystem** with partner-specific rates.
 - Enable efficient **weekly payouts** and seamless onboarding.
 - Establish Groomsta as a **trusted, premium service brand**.
-

3. Target Users

3.1 Customers

- Primary users booking home grooming services or salon services.
- Want convenience, trust, transparent pricing, and reliable professionals.

3.2 Partners (Groomers / Salons)

- Individuals or salons wanting to offer services through Groomsta.
 - Want a stable flow of jobs, transparent earnings, and easy onboarding.
-

4. Key Product Components

1. **Unified Login Interface** – Customer or Partner login.
2. **Customer Web App** – Service browsing, booking, payments, tracking.
3. **Partner Web App** – Job acceptance, service management, earnings.
4. **Admin Backend (Internal)** – Service configuration, partners, payouts.
5. **Notifications Engine** – SMS, WhatsApp, email, push notifications.
6. **Payments & Wallet System** – Online payments, credits, referral rewards.

5. Customer Experience (CX)

5.1 Home Screen

- Simple hero section with options:
 - **Home Services**
 - **Salon Services**
- Optional: service search bar.

5.2 Guest Booking

- Customers can place bookings without creating an account.
- OTP verification required during checkout.

5.3 Service Browsing

Services organized as: - **Categories** → **Subcategories** → **Services** - Variants based on gender/location when applicable.

5.4 Service Details Page

- Description, duration, partner price range, customer reviews.
- Add-ons and bundled packages.

5.5 Location & Address

- Pincode serviceability check.
- Address input OR Google Maps location picker.

5.6 Booking Flow

- Customer selects:
 - Date
 - Time window (preferred)
- Booking request sent to nearby partners.
- First partner to accept gets the job.

5.7 Payments

Options: - Online full payment - Online partial + post-service - Pay after service

5.8 Order Tracking

- Real-time updates (accepted, on the way, started, completed).
- Optional map tracking in future.

5.9 Referrals & Membership

- Referral: ₹100 to both parties.
 - Membership plan (to be optimized): flat monthly discount, priority support.
-

6. Partner Experience (PX)

6.1 Partner Login

- Mobile/email login.
- Separate Partner UI.

6.2 Partner Onboarding

- Personal details
- KYC (ID proof, photo)
- Experience & skills
- Bank details
- Salon onboarding if applicable
- Services offered + pricing flexibility

6.3 Job Requests

- Requests pushed to all nearby partners.
- Accept or Reject.
- Request auto-expires in 20 seconds.

6.4 Partner Dashboard

Sections: - **Jobs** (Incoming, Active, Past) - **Earnings** (Weekly payouts, history) - **Services** (Set pricing within range) - **Availability** (Work hours) - **Profile**

6.5 Pricing Controls

Partners can: - Increase/decrease base price within allowed range - Add custom add-on fees (pre-approved)

6.6 Payout Logic

- Weekly automated payouts.
 - Commission deducted before payout.
-

7. Authentication System

- OTP login via phone
- Email + password optional

- Customers and partners have **separate accounts**
 - Admin access controlled separately
-

8. Dynamic Pricing Engine

1. Groomsta sets **base prices** per service.
2. Partners choose their pricing **within a $\pm$ range**.
3. Surge pricing triggers during:
4. High demand
5. Low partner supply

Customer sees: - Price range OR the exact partner price once job is accepted.

9. Payments & Wallet

- Razorpay integration
 - User wallet stores:
 - Referral credits
 - Membership discounts
 - Refunds
-

10. Notification System

- SMS for OTP + urgent alerts
 - WhatsApp confirmations + updates
 - Email for invoices
 - Push notifications for partners (later in mobile app)
-

11. Admin Dashboard

Minimal V1 features: - Manage services & pricing - Manage partners (verify, suspend, edit) - Customer bookings - Payout processing + reports - Coupons, referrals, memberships - Partner performance metrics

12. Technical Architecture

Frontend

- React (or Next.js for SSR + SEO)
- Responsive PWA experience

Backend

- Node.js / Express or Next.js API
- Real-time push using Firebase or Socket.io

Database

- PostgreSQL (primary)
- Redis (real-time + caching)

Storage

- AWS S3 or Supabase Storage
-

13. Database Schema (High Level)

Tables: - Users - Partners - Partner_Documents - Services - Service_Categories - Service_Subcategories - Partner_Services - Bookings - Booking_Requests - Payments - Payouts - Wallet - Notifications - Reviews - Coupons - Memberships - Locations

14. Success Metrics

Customer Metrics

- Conversion rate from homepage → booking
- Repeat bookings per month
- Referral usage rate

Partner Metrics

- Partner activation rate
- Acceptance rate on jobs
- Weekly earnings growth

Business Metrics

- GMV
 - Commission margin
 - Operational efficiency
-

15. Risks

- Partner reliability variations
- Fraud bookings

- Payment failures
- Delays during peak hours

Mitigation: ratings, advance payments, buffer times.

16. Phase-wise Roadmap

Phase 1: MVP

- Core booking flow
- Partner acceptance system
- OTP login
- Payout system
- Admin dashboard

Phase 2: Experience Upgrade

- Referral system
- Membership system
- Partner maps
- Ratings & reviews
- PWA optimizations

Phase 3: Scale

- Full mobile apps (React Native)
 - AI-based partner assignment
 - Salon marketplace expansion
-

This PRD will be continuously updated as we finalize decisions and start UI wireframing.
